### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bryan Davidson on 8/11/2009.

The application has been amended as follows:

Amend claim 1 as follows:

Delete the phrase "from a" from line 1, so that line 1 reads:

"A method for producing a resin composition pellet"

In line 18 of claim 1 insert the word "in", so that line 18 reads:

"downstream of the main feed port in an extrusion"

Cancel claims 9 and 10

2. The following is an examiner's statement of reasons for allowance:

3. The prior does not anticipate or make obvious a method for making a fiber resin composite pellet. Where the fibers had a starting length of 1 mm or more, and a length of 180 to 360 microns after extrusion, and where the resin was introduced into the extruder in an amount x (10 to 50 parts) in the first feed port, and a second amount of

Art Unit: 1791

the resin 1-x (50 to 90 parts) along with all the fiber is introduced in a second feed port downstream from the first feed port.

4. The closest prior art of record is Kato et al (U.S. Patent 6,726,464), Dolinar (U.S. Patent 7,410,687), and Koizumi et al (U.S. Patent 5,883,159). Both Kato et al and Dolinar teach that resin is introduced into a first feed port, and that more resin and a filler (in both patents the filler is a wooden cellulose material) are introduced in a second feed port downstream from the first feed port.

5. However similar with Kato et al and Dolinar, there is no motivation for a skilled artisan to say that the introduction of the resin and then the resin/filler will produce a reduction in the filler length, as compared to the instant application where the introduction of the resin and resin/fibers produces a specified reduction in fiber length. Due to the fact that the wooden fillers are not fibers, in the sense that a certain length to diameter ratio exists. Furthermore the products produced by the above prior art are continuous artificial wood boards that are heterogeneous in nature (which indicates an entirely different reasoning for applying the resin/filler in a downstream feed port), while the pellet of the instant application produces a homogeneous blend of the resin and fiber.

6. Koizumi et al teaches a fiber resin composite where the final length of the fibers after extrusion is 400 to 800 microns. Koizumi does not specify how the fibers are introduced into the extruder, and also as shown by the Applicant's the final fiber length of Koizumi does not produce very good molding when small feature sizes are present.

Art Unit: 1791

Furthermore there would be no indication of success, based on their disclosures, that a combination of Koizumi with Kato et al or Dolinar would result in the instant invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TIMOTHY KENNEDY whose telephone number is (571) 270-7068. The examiner can normally be reached on Monday to Friday 9:00am to 6:00pm.
